Professional Summary

DevOps Engineer with 2+ years of experience designing and automating cloud infrastructure for production-grade e-commerce platforms. Specialized in CI/CD pipeline architecture, Kubernetes-based container orchestration, and AWS infrastructure management using IaC principles. Proven ability to reduce manual deployment effort, enforce code quality gates, and maintain high-availability systems that support business-critical operations.

Experience

Kyndryl

DevOps Engineer

Feb 2026 – Present

Noida, Uttar Pradesh, India

- Architected and maintained **end-to-end CI/CD pipelines using Jenkins**, automating build, test, quality-gate, and deployment stages for a production-grade, high-availability e-commerce platform.
- Integrated **SonarQube** into Jenkins pipelines to enforce static code analysis and quality standards prior to every deployment, reducing post-deployment defect rates.

NTT Data

Associate DevOps Engineer

June 2024 – Jan 2026

Gurugram, Haryana, India

- Deployed and managed containerized workloads on **Kubernetes** across multiple environments, ensuring scalability, resilience, and rolling-update deployments with zero downtime.
- Provisioned and managed **AWS cloud infrastructure using Terraform** (Infrastructure as Code), enabling versioned, auditable, and repeatable environment provisioning.
- Implemented **IAM role-based access control** and bastion host architecture to enforce least-privilege security and secure access to production systems.
- Minimized manual intervention in release workflows, improving deployment frequency and release reliability for an e-commerce platform with high-traffic requirements.

Key Projects

- Production E-Commerce CI/CD Platform** (April, 2025)
Technologies: Jenkins, Docker, Kubernetes, SonarQube, AWS
 - Designed a fully automated CI/CD pipeline for a production-grade e-commerce platform with high-availability requirements.
 - Automated build, test, code quality analysis, and Kubernetes deployment stages using Jenkins.
 - Reduced deployment time and minimized manual intervention significantly.
- AWS Infrastructure Automation with Terraform** (July, 2024)
Technologies: Terraform, AWS EC2, VPC, IAM, S3
 - Built reusable Terraform modules for provisioning AWS infrastructure (VPC, EC2, IAM, security groups, bastion host).
 - Standardized infrastructure setup across dev, staging, and production environments.
 - Eliminated configuration drift and improved deployment consistency.

Technical Skills

Cloud Platforms: Amazon Web Services (EC2, S3, VPC, IAM, RDS, CloudWatch, Route53)

CI/CD & Automation: Jenkins, GitLab CI, GitHub Actions, Bash Scripting, Shell Automation

Containerization & Orchestration: Docker, Kubernetes (K8s), Helm

Infrastructure as Code: Terraform, CloudFormation

Code Quality & Security: SonarQube, Static Code Analysis, IAM Policies, Bastion Host, SAST, DAST

Operating Systems: Linux Administration (Ubuntu, CentOS), Bash Shell

Version Control: Git, GitHub, GitLab

Programming / Scripting: JavaScript (Intermediate), Bash, YAML, JSON

Monitoring: CloudWatch, Prometheus, Grafana

Education

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology – Computer Science

2019 – 2023

Lucknow, India

Certifications & Achievements

- CCT (Cisco Certified Technician)** [View Certificate]
- Linux Essentials – The Linux Foundation** [View Certificate]
- Google Kick Start** [View Certificate]
- Meta (Facebook) Hacker Cup** [View Certificate]
